

Launching Swayzo Clan War Management Software

Battlefield Sports Starts 2014 off with a new Software product "Swayzo" for Clan War Management

Introducing the new "Swayzo" Clan War Software, Swayzo is a new software application to help you run a Swiss-style Battlefield LIVE Clan War.

Swayzo uses a Swiss-style tournament management software system.

The Swiss format involves all clans playing several round of competition.

Clans face-off clan-verses-clan in each round. Working with the SATR software up to four battlefields can be run simultaneously in close quarters without cross-fire. So up to eight clans can play simultaneously.

Recommended Missions to Play with Swayzo

Battlefield Sports recommend running the SATR Domination Game for each round so that battlefield operators can cycle-through the game rounds lighting-fast.

The first round the pairings are random or based on previous ratings (the user selects this when setting up a new event/clan war in Swayzo).

Then the second and subsequent rounds clans are paired using a formula where a winning clan faces-off against another winner. And a losing clan versus another clan that has also lost their round.

The Swiss systems differs from a round-robin tournament or a knock-out competition. The benefit of a Swiss comp is that no clan is eliminated, all clans get to participate in all rounds. The only exception to this if there is an odd number of clans, in this case Swayzo will determine which clan has the bye.

Swayzo Clan War Management Software

Swayzo helps the Battlefield Operator smoothly run a clan war. This is a new software program is designed to make it easy for you to run Swiss clan wars. Here is what it can do for you:

- Event manager - enter clans, creates the clan war as an event, generates the draw, enters the results. This module covers all the data entry. Calls the battles and prints battle cards. It keeps track of which clans have checked in or are currently playing.
- Leaderboard - displays the ladder of results.
- Draw board - shows which clan is playing this round (calls the battles, which clan on which battlefield) shows all other battles in the current round.
