

SATR 2 - Live Gaming with Business PERKS

SATR is on the cutting edge of the latest trend in the live gaming industry: game “Perks”. Perks are special bonuses that gamers can add to their characters to give them special abilities as they act out their hero in a Live-Play (live game). The term Perk actually is a shortened form of the word prerequisite. The concept of perks that are progressively unlocked were first used in role-play video games in the mid-1980s. The concept has been more recently used in first-person shooters such as Call of Duty. Since Battlefield LIVE is a hybrid of live-action role-playing and FPS then integrating perks into the live game was inevitable. SATR 2.0 is built on the excitement of its first generation technology and re-invents itself with even more flexibility. SATR stands for Small Arms Transmitter Receiver and is a laser tag system that amplifies game-play. SATR 2.0 has retained the functionality of the original product but takes its benefits for battlefield operators to the next level.

We have re-engineered our software from the firmware level all the way to the user interface. We have listened to the feedback from Battlefield Operators & incorporated into the new system what they needed & wanted. In doing so we've created a solution that's truly feature rich, leveraging the best of our philosophy & delivering significant business benefits to our customers for many years to come. This is a game-changer.
